

Charles Hume

Jacksonville, FL | (904) 864-1301 | charliehume0806@gmail.com | <https://chume2.github.io/portfolio/>

EDUCATION

Villanova University | Villanova, PA

Graduated Magna Cum Laude – Class of 2025

B.S. in Mathematics and Computer Science

GPA: 3.87 | Dean's List All Semesters | Upsilon Pi Epsilon Member

Additional Courses and Certifications:

AI Fluency: Framework & Foundations, Claude 101 by Anthropic

The Ultimate React Native Series: Fundamentals and Advanced Concepts, Spring Boot: Mastering the Fundamentals and Mastering REST API Development, The Ultimate Git Course by Mosh Hamedani (<https://codewithmosh.com/courses>)

SKILLS

Proficient in Java, Python, JavaScript, TypeScript, SQL, HTML, CSS, R

Front-end experience with React. Backend experience with Spring Boot

Experience creating mobile apps using React Native and web apps using React

Relational database design and management with MySQL

Proficient in building REST APIs and using Git Version Control

Knowledge and application of important cybersecurity principles such as token-based authentication

Mathematical and statistical prowess, problem solving ability. Object-oriented programming.

Experience working in Agile/Scrum. Project management with Trello (Kanban).

Machine learning modeling using TensorFlow and scikit-learn. Experience with containerization using Docker

Data science and data visualization skills using R

Game development experience with Unity (C#) and Unreal Engine 5 (C++). Experience 3D modeling with Blender.

Experience with Mac, Linux, and Windows OS. Expert with Microsoft Excel.

Excellent verbal and written communication skills. Advanced Spanish speaking, writing, and listening

WORK EXPERIENCE

DataAnnotation | Remote

Apr 2026 – Present

- Train and evaluate AI models by reviewing outputs for accuracy, consistency, and alignment with guidelines
- Review, evaluate, and provide clear, actionable feedback to coding agents responses to complex, real-world prompts
- Work closely with the most up-to-date LLMs in the industry, such as Anthropic's Claude and Google Gemini
- Use Docker to create consistent, reproducible development environments, ensuring reliable testing and evaluation of code across different systems and configurations

Chancey Metals, LLC | Jacksonville, FL | Intern

May – Sep 2023

- Built dynamic pricing estimation models in Microsoft Excel for the company's entire catalog of various metal products
- Learned to organize data tables efficiently, write complex formulas, and sync multiple workbooks together
- Scheduled and held meetings with shop floor workers, managers, and company executives to learn pertinent information about how certain metal products are manufactured and installed
- Presented the new estimation models to the estimation team and taught them to use the new system
- Chancey ranked 21st fastest growing company in Jacksonville in 2024 according to Jacksonville Business Journal

PROGRAMMING AND MATHEMATICS PROJECTS

Sports Betting Mobile App | Startup

Jan 2026 – Present

- Designing and developing a full-stack sportsbook platform that supports bet placement, tracking, and settlement, with a focus on scalable backend architecture, reliable transaction and balance management, and a responsive user interface for seamless user experience. Built using React Native, Spring Boot, TypeScript, Java, and MySQL.

Social Connect | Senior Project | Lead Front End Developer

Jan – Dec 2024

- Created a web app where content creators can link their Instagram, TikTok, and YouTube accounts. Dashboard uses API calls to display user's most recent posts, an interactive calendar to schedule future posts, graphical analytics of views, likes, shares, and watch time, and a visual of most recent comments received across all platforms with the ability to reply to them. Built using React, Spring Boot, JavaScript, Java, MySQL, and hosted on AWS.

NBA Draft Prospects Machine Learning Project

Mar – May 2025

- Created multiple machine learning models that could analyze college basketball players' stats and help scouts determine who they should draft. Used logistic regression, decision trees, random forests, neural networks, and ensembles.
